

Olink®  
Accelerating proteomics together

Revealing the truth of  
human disease.  
Protein by protein.

Olink®  
Accelerating proteomics together

# Market leader - driving a new era in proteomics

Validated

Consortia

Scalability

Biopharma and prestigious academic institutions are our customers

Serving the 20 largest biopharma companies (by revenue in 2020)

Labs around the world using Olink technology

Coverage of all major biological pathways

Peer-reviewed publications

Complete technical validation of each protein assay

Global consortia within proteogenomics, neurology, IBD

Completely scalable high-plex, mid-plex and custom

Olink®  
Accelerating proteomics together

## Platform

Our platform offers the accuracy and sensitivity of manual techniques, with dramatically higher sample and analyte throughput

Proximity Extension Assay (PEA)

## Products

Our panels spotlight key human proteins central to understanding disease

Olink Target

Olink Flex and Focus

Olink®  
Accelerating proteomics together

# 1,800+ publications

## DISEASE AREAS

Cardiovascular diseases  
Cardiovascular/renal/respiratory diseases  
Dermatological diseases  
Endocrine disorders/endocrinology  
Immunotherapy  
Infectious diseases  
Inflammatory diseases  
Metabolic diseases  
Nephrology  
Neurology  
Neurovascular diseases  
Oncology  
Ophthalmology  
Other diseases & syndromes  
Respiratory diseases  
and more

Low sensitivity

Lack of specificity

High sample consumption

Limited dynamic range

## Historic technological challenges in proteomics

Technology limitations such as quality, sample consumption and dynamic range, make solving complex biological questions unfeasible.

Low sensitivity

Lack of specificity

High sample consumption

Limited dynamic range

## Proprietary PEA technology

Solving the fundamental challenges in proteomics;  
sensitivity, specificity, sample consumption and  
dynamic range

## High sensitivity

low pg / mL

## Exceptional specificity

Dual antibody recognition and  
barcoding required by PEA

## Minimal sample volume

Equal to or less than 6  $\mu$ l required

## Dynamic range

5,400+ proteins covers  
10 logs (fg/ml - mg/ml)

Olink®  
Accelerating proteomics together

## A wide range of compatible sample matrices

Human EDTA Plasma/Serum  
Mouse plasma/serum  
Conditioned media  
Cell/tissue lysates  
Cerebrospinal fluid (CSF)  
Urine  
Interstitial fluid/microdialysis  
Ocular fluids  
Dried blood spots  
Exosomes  
Synovial fluid  
and many more ...

~1 µl per 96 plex panel

Olink®  
Accelerating proteomics together

Why scientists are using our products

Understand biology,  
improve detection  
and develop better  
therapies

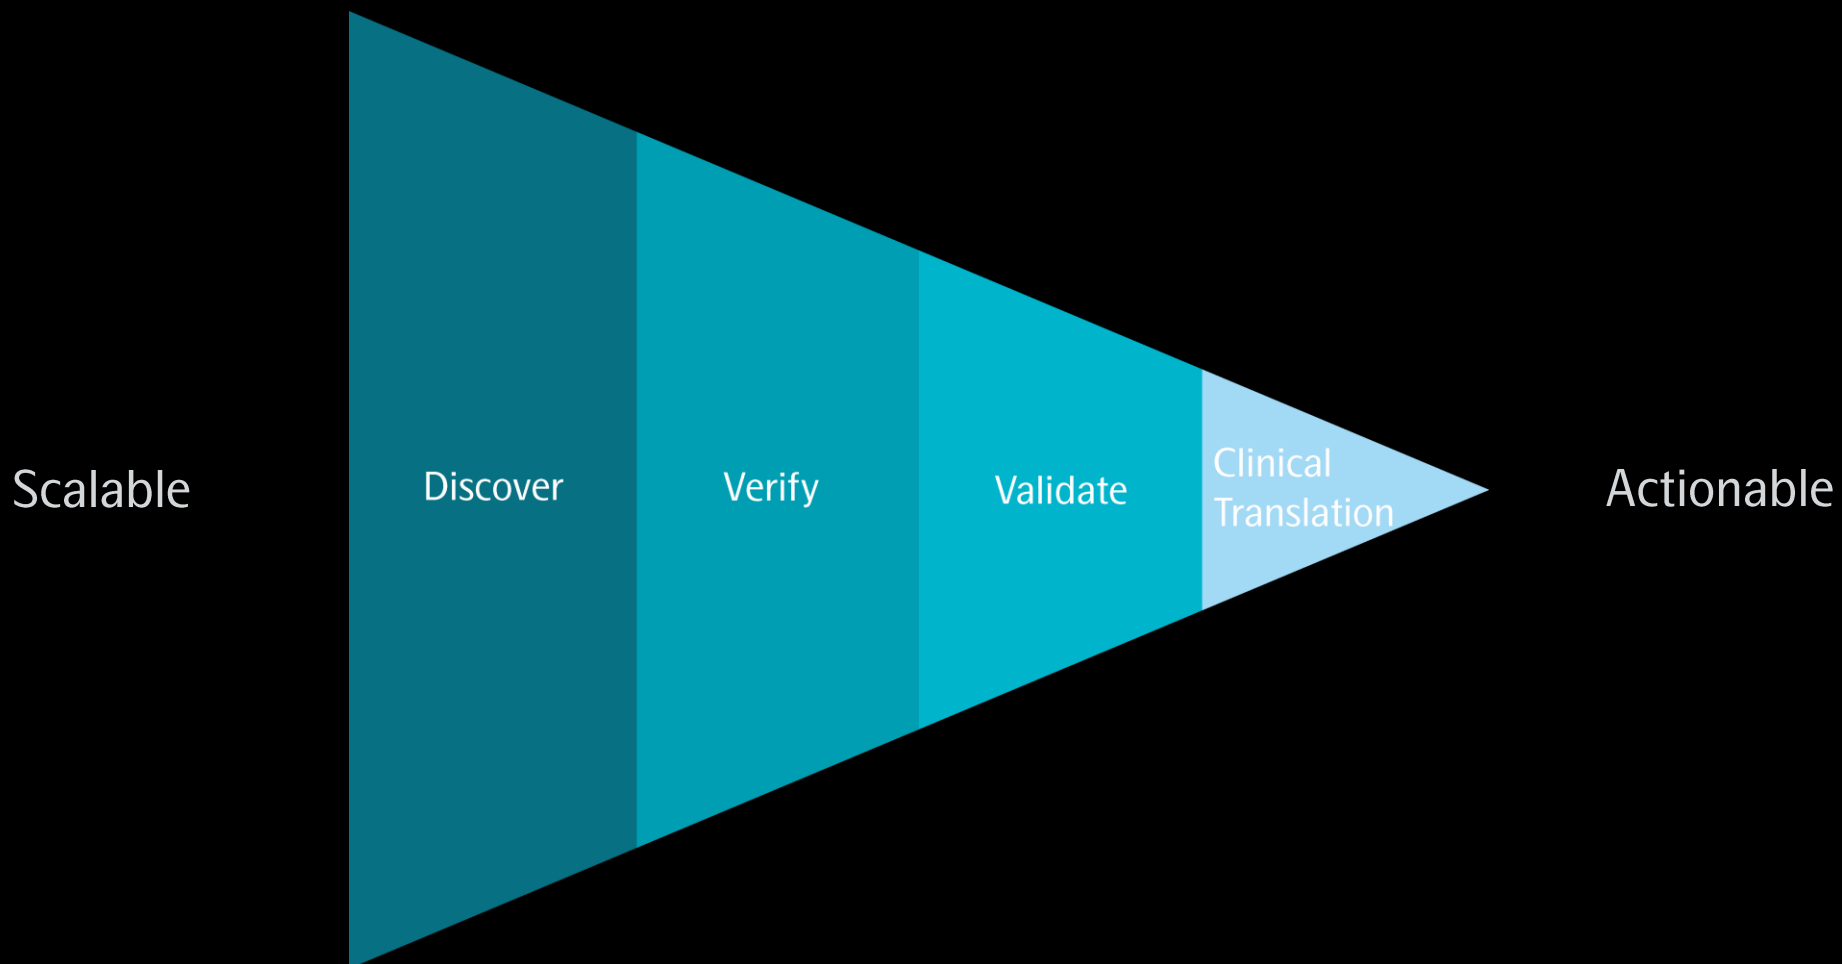

Olink®  
Accelerating proteomics together

# One protein biomarker platform with endless possibilities – Understand real-time human biology

Olink®  
Accelerating proteomics together

Our vision

# Enable understanding of real-time human biology

Genomics

Epigenomics

Transcriptomics

Proteomics

Metabolomics

A complete understanding  
of human biology
